

Optimum water level

Optimum water level

The Xpansion Mini is the only hookah that can be used with plug-in bowls that have a dip tube that can be extended in multiple stages to accommodate different bowl shapes and sizes! The Steamulation Dip Tube Control Technology. Here it is possible to smoke with diffuser as well as without diffuser. The lower dip tube element can simply be mounted upside down for this purpose.

For an optimum smoking experience in terms of the draft, we recommend to immerse the dip tube only a maximum of 1cm - 1.5cm into the water. The more water is filled in the vase, the more difficult the draft becomes. In addition, the bubbling of the hookah increases and at a certain point it can cause water to be pulled up into the hose by drawing too hard (in conjunction with the wrong water level).

Xpansion technology

Xpansion technology

Steamulation revolutionizes conventional plug-in hookahs with the Xpansion technology! The goal is to make Steamulation Xpansion hookahs fit perfectly to any glass.

Step 1 - Adjust the Xpansion-seal:

In the first step, adjust the size of the Xpansion-seal to fit your glass. To do this, simply insert the Xpansion-base into your glass and test whether or not the seal needs to be expanded. Turn the Xpansion-ring counterclockwise to expand it. Turn the Xpansion-ring clockwise to make it smaller. The Xpansion-seal should rub when it is connected to the glass, but it should still fit snugly into the glass.

Step 2 - Tighten the Xpansion-base:

Once you have the Xpansion-base tucked into the glass and the seal has grip, you can now turn the base clockwise and the seal will expand even further! This will allow you to perfectly fit the seal inside the glass.

Step 3 - Loosening the Xpansion-Base:

If you want to loosen the Xpansion-base again, simply turn it counterclockwise inside the glass and the seal will shrink, allowing you to comfortably take the base out again.

Important Note:

We recommend drying both the inside neck of the vase as well as the seal before usage. Moisture or lubricants (molasses) will reduce the grip of the Xpansion-seal, making fine adjustments within the glass more difficult. In addition, we would like to point out that this is not a molded closure. Carry the hookah exclusively on the glass. If you lift the shisha by the smoke column, the glass **may come loose and shatter**.

The Steamulation Xpansion Mini comes with two Xpansion-sealing rings. 3.5mm thickness for smaller glasses and 4.0mm thickness for glasses with a larger diameter at the neck. The sealing ring can be easily replaced by unscrewing the Xpansion-ring completely from the Xpansion-base.
